

Waste Disposals (2003) Limited

Integrated waste management services

Waste Disposals (2003) Limited of Trinidad and Tobago has been in the business of providing integrated waste management services to domestic, municipal, commercial, and industrial clients for over thirty years. A main focus of the company's activities has been the manufacture of its own equipment which is then rented to its customers. The equipment is used for the collection, haulage, treatment, and disposal of various categories of liquid, solid, and hazardous wastes.

Waste Disposals Ltd. pioneered the use of modern containerized waste collection equipment and continues to be the industry leader by introducing new containerized systems and approaches to waste handling

in Trinidad and Tobago and the Eastern Caribbean. In 1981, the company introduced its Ampliroll (roll on/roll off) system, giving clients the ability to choose the waste collection method that best suits their specific requirements, such as open top containers, on-site compactors, on-site shredders, and sludge tanks.

The company's PAK MOR System was the first mechanically-lifted, waste container service to operate in the country. The introduction of this straight-forward and unique side-loading system allowed small, medium, and large waste generators the opportunity to contain their waste and have it efficiently and economically removed. Due to its cost and time-saving benefits,
