tion technologies that businesses need to stay competitive and efficient. Some of the world-class vendors it partners with include: Xerox, IBM, Juniper, VMWARE, Lenovo, VeriFone, DataCard, Systimax, Cisco, HP, Dell, Microsoft, Citrix, MagTek, JanTek, For the Record, Virtual Doxx, Biamp, and Syspro, among others.

But back then, before personal computers (PCs) sat atop every desk in every office in the land, Galt was merely supplying his customers with the basics. "We were in the business of selling office equipment – typewriters, calculators, office furniture," he recounts. "But because I realized that the world was going to be, one day, a digital space, I started to move in the direction of tying to learn as much as I could about what type of computer technology was available. In those days, what was available was basically accounting machines - the PC had not yet been launched.

The Commodore computer was very small and very inadequate, but by 1981, we got access to the first PC that was manufactured for a company called Monroe Systems for Business, and when we were exposed
